LAND & LEDGERS — CONTINUATION: SEMANTIC RETENTION AUDIT II

Date: October 8, 2026
Disposition: Additional source-backed precision recovered; full no-loss certification remains OPEN.
Frozen authorities: Canon XXXI (346 pages); Technical XIV (170 pages); specialist research references retained.
Review: 18 Canon precision entries and 19 Technical precision entries, each checked for an actual phrase on its cited original PDF page.

What the second pass establishes

- New v0.3 **provisional** Canon and Technical Markdown editions retain the earlier consolidated drafts in full and append source-traced precision provisions, instead of silently replacing or deleting original rules.
- Entries are from older already-authoritative source wording, **not** approval of design-proposal numbers 106–145.
- Each source anchor was programmatically located at the stated physical PDF page; this verifies citation location, **not** semantic coverage of every source provision or Unity correctness.
- All pages of the original Bibles remain in the frozen source archive; this verification process is a conservative additions-only step.

Highest-consequence recovered safeguards

1. Legal violation does not imply instantaneous detection, legal service or enforcement; actions may persist pending procedures (Canon XXXI PDF p.56).
2. Historical news is information acquired through plausible time-and-channel paths, not instant omniscient notification (Canon XXXI PDF p.230).
3. Training and assessment are different; training consumes time, and evaluation updates knowledge rather than employee capability (Canon XXXI PDF p.212).
4. In the 1870–1905 period, farm share tenants are agricultural operators under tenure agreements, not automatically wage employees (Canon XXXI PDF p.33; Technical XIV p.24).
5. Livestock losses are stage-specific and correlated through shared exposure, not flat mortality rolls (Canon XXXI p.87; Technical XIV p.76).
6. Economic world distance remains 1:1 during rendering, streaming and simulation-level changes (Technical XIV p.78).
7. Procedural population/economic generation must respect geography, rural production, routes and markets before staffing (Technical XIV p.44).
8. Banking risk and panic are resolved through actual deposit liabilities, liquidity and concrete withdrawal requests (Technical XIV p.14).
9. A claim, service invoice or prime contractor payment never extinguishes unrelated contractor-worker-supplier obligations (Canon XXXI pp.42–43).

10. The documented CreateBlockedShipment(...) duplication issue remains a **P0 regression/repository verification gate**, not a fixed defect (Technical XIV p.101).

Remaining release gates

- **Canonical:** Meaning-level review of every materially distinct current-source clause remains incomplete. The automated lexical concordance and this targeted precision pass do not provide an exhaustive proof.
- **Technical:** The 36 architecture authorities and detailed source-retention addenda are test specifications; no Unity tests ran in this turn.
- **Repository:** The public scripts GitHub main baseline can be inspected only as the posted baseline; any later unpushed local work cannot be inferred. Code inspection and Git history must be version pinned before claiming compliance.
- **Design:** Original proposals 1–105 approved; 106–145 remain individually pending unless they restate a higher-priority existing rule. Existing-rule extraction does not change that approval status.
- **Historical:** Date/jurisdiction-specific law and financial rates remain research and authored data holds.

Recommended next validation

1. Obtain a current repository snapshot / connected GitHub source and record commit hash.
2. Prioritize CreateBlockedShipment(...), ownership/cash, Person time/EmploymentRelationship, and BusinessType-as-permission tests with concrete source code and save/load evidence.
3. Continue a full original-to-consolidated provision review, matching each substantive clause to a retained requirement, explicit supersession or specialist source; do not close the no-loss gate from lexical similarity alone.
