LAND & LEDGERS

SCENARIO, PLAYTEST AND REGRESSION REFERENCE

STEP 13 — CONTROLLED EDITION

Date: 8 October 2026 | **Status:** Extracted scenario reference, not runnable scenario definitions | **Authority:** Canon XXXI remains governing.

Method. All scenario claims below come from dated Canon/Technical cumulative PDFs with page trails, not from source project scene/ScenarioDefinition JSON. Text-playtest results are evidence of conceptual stress testing, not proof of Unity mechanics. Earlier autonomous playtest numerical outcomes are illustrative, not universal balance parameters.

I. Global scenario doctrine

1. Objectives read real events and authoritative economic/physical state; objectives may not generate people, property, passengers, cargo, credit or business activity needed for their own completion (Canon XXXI p.7).
2. Each predicate is explicitly Event, Current, Maintained, or Cumulative, with a dated evidence reference and scenario-qualified geographic scope.
3. Completion of an event milestone normally survives later disposal of an enabling asset; maintained or current ownership qualifications reevaluate.
4. Ownership qualification explicitly distinguishes sole, joint, controlling, minority and genuinely independent NPC state.
5. Scenario equity uses authored asset/liability inclusion, valuation basis and starting-asset policy; debt proceeds do not create equity.
6. Scenario failure does not automatically equal commercial bankruptcy or destruction of the persistent world (Canon XXXI p.114).
7. Role constraints in a deliberate scenario may restrict the player's labor, but do not change ordinary simulation rules for everyone else.
8. Keep text-playtest data, rules and executable Unity test results in separate source/evidence categories.

II. Scenario and playtest registry

SCN-001 — The Crossing

Category: Full-systems settlement founder

Source: Canon XXXI PDF pp.1, 5–9; Technical XIV PDF pp.1–8

Baseline: 1870 northern-Dakota river crossing; one player, one cabin, $500, no local service town are playtest setup, not universal start

Systems: Ferry, retail, smithing, construction, lumber, property, contact-graph hiring, freight, warehouse, river service and manager autonomy

Objective/acceptance notes: Preserve independently owned NPC enterprise, freight/passenger evidence, current-equity definition and business operating proof; verify exact full scenario objectives against standalone scenario source if available

Confidence: Validated text playtest finding, not Unity integration proof

SCN-002 — The Market Town

Category: Autonomous mixed business and growth

Source: Canon XXXI PDF pp.10–20; Technical XIV preserved Revision XIII pp.9–20

Baseline: Growing settlement, rental development, finance office/banking, pharmacy/barber/butchery and demography

Systems: Manager independence, rental project completion vs occupancy, finance deposits vs owner cash, loan placement, household continuity

Objective/acceptance notes: Scenario-specific goals and setup require source-specific extraction; owner cash, business cash and debt must reconcile

Confidence: Validated text playtest finding, not Unity integration proof

SCN-003 — The Enterprise Ladder

Category: Progression and corporate control

Source: Canon XXXI PDF pp.119–125; 125–133

Baseline: Preserved playtest 1880–1890 with bakery, grain company, rail corporation; historical setup is not universal starting date

Systems: Business transferability, segment costs, rail company capitalization and phased service, standing contracts, meaningful tasks

Objective/acceptance notes: Geographically scoped objective, cash/value/ownership filters and milestone semantics; precise deadlines from actual scenario definition

Confidence: Validated text playtest finding, not Unity integration proof

SCN-004 — The Saloon Circuit

Category: Three-town business ownership and vertical integration

Source: Canon XXXI PDF pp.113–118 and later preserved saloon sections; Technical XIV preserved Rev IV p.4–5

Baseline: Scenario with three saloon locations; specific objective wording controls

Systems: Owned farm poultry -> processing -> transport -> preparation -> individual qualifying customer transaction, gambling cash and independent concession

Objective/acceptance notes: Internal provenance counts only proven qualifying transactions; event milestones remain complete after selling supplier; 100%-current ownership where authored

Confidence: Scenario ideas/provenance fixtures; current exact full goal list needs scenario artifact

SCN-005 — The Contractor

Category: Construction and paid-work accomplishments

Source: Canon XXXI PDF pp.42–46 and pp.108–112; Technical XIV preserved Rev V

Baseline: Construction contractor path, individual labor and paid contracts

Systems: Actual work periods, crews, overlap, contractor qualification from evidence and truthful construction cost

Objective/acceptance notes: Paid contract evidence, person-specific self-labor hours, hire/zero-manual labor predicates and active-overlap window; deadlines only from approved scenario definition

Confidence: Scenario design with regression fixtures; not verified in Unity

SCN-006 — A Town From Nothing / The Promoter

Category: Autonomous settlement formation and economic viability

Source: Canon XXXI PDF pp.18–20, 108–113; Technical XIV preserved Rev XIII pp.17–20

Baseline: New/collapsing economic locality; NPC/private enterprise and civic/route options

Systems: Population from Persons, homes from physical occupancy, business operation, real capital and migration sources

Objective/acceptance notes: Cannot create migrants, residents or firms solely to satisfy objective; no universal population bonus

Confidence: Scenario concept and fixture, exact objective pack research hold

SCN-007 — Ashes & Notes

Category: Distress, debt and reconstruction

Source: Canon XXXI PDF pp.108–113

Baseline: Damaged collateral, finance and recovery circumstances

Systems: Asset losses do not erase debt; cash obligations, lender rights, insurance if applicable and repair work

Objective/acceptance notes: Restructuring/foreclosure and objective must read separate obligations and rights

Confidence: Scenario concept, detailed starting state requires original source

SCN-008 — The Long Haul / Gateway / Deep Mine / Timber Country / The Panic

Category: Proposed sectoral scenario concepts

Source: Canon XXXI PDF p.236

Baseline: Appendix design examples; NOT complete authored scenario definitions

Systems: Freight contracts, service networks, mining and lumber input, finance stress

Objective/acceptance notes: Archive as development candidates until individually authored objectives, setups and tests exist

Confidence: Proposals only, no completed playtest claims

III. Cross-scenario acceptance fixture bank

ID	Fixture	Acceptance requirement	Source trail
QA-001	Generic Business	Create Business with no type, then supply merchandise/forge; classification may change while action feasibility follows actual state	TECH XIV pp.6–7
QA-002	Worker autonomy	Physically possible but unsafe/out-of-contract assignment permits refusal	TECH XIV p.7
QA-003	Employment contactability	Person is not globally recruitable; a real introduction/referral creates contact and response latency	TECH XIV p.7
QA-004	Active work vs contract signatures	Count actual labor assignments and overlapping Work intervals rather than agreement dates	TECH XIV preserved Rev V; Canon XXXI pp.108–112
QA-005	Chicken provenance	Owned source animal -> lawful transformation -> shipment -> kitchen output -> sale to real customer; outside purchase fails internally sourced objective	TECH XIV preserved Rev IV pp.4–5
QA-006	Blocked shipment	No fabricated loaded cargo can coexist with source-stock restoration across failed dispatch and save/load	TECH XIV preserved Rev IV pp.4–5

QA-007	Business ownership	Independently owned NPC-business objective does not count controlled subsidiaries	TECH XIV pp.6–7
QA-008	Equity	Borrowing increases cash and debt equally, not owner equity; starting asset inclusion is scenario-defined	Canon XXXI p.7, TECH XIV p.6
QA-009	Historical toggle	Disabled authored Panic cannot inject effect, endogenous distress still possible	TECH XIV pp.6–7
QA-010	Operating state	Constructed building/Business identity does not satisfy OperatingBusiness	TECH XIV p.6
QA-011	NPC continuity	Population from actual Person arrivals and residence, not project or housing completion	TECH XIV preserved Rev XIII; Canon XXXI pp.4–8
QA-012	True asset reorganization	Merger transfers underlying obligations, cash, property and employees once; grouping does not	TECH XIV pp.5–7
QA-013	Portfolio autonomy	Extended ordinary operation with zero owner clicks, real manager activities and owner-locked decisions respected	TECH XIV p.7, Canon XXXI pp.4–5
QA-014	Record reconciliation	Known ledger correction carries explicit adjustment evidence, never silently rewritten history	TECH XIV pp.6–7
QA-015	Rail service opening	Survey, financing, grade, tracks, facilities and actual train service remain separate	TECH XIV preserved Rev VIII; Canon XXXI pp.70–82
QA-016	Save/load idempotence	Active recruitment, queued work, shipment, reorganization, biological incubation and historical event injection do not double-fire	TECH XIV p.7

IV. Provenance and generated-number cautions

- The Crossing $500, The Enterprise Ladder 1880 start and illustrative chicken quantities are valid for those playtests only; none updates the baseline 1870 start or default owner wealth.
- Exact deadlines, all objectives, map/settlement placement, starting populations and cash require their individually approved scenario definitions; the cumulative Canon snippets do not substitute for those assets.
- Scenario event evidence must survive save/load, owner transfer where applicable and time jumps without replay creating an extra transaction.
- Preserve campaign checkpoint IDs, parent checkpoint, time, source event span, cash/inventory/debt and reconciliation status so a simulated story cannot manufacture exact accounting facts.
- Keep scripted historical-event settings and physically generated incidents independently testable.

V. Outstanding work and implementation prerequisites

- Obtain the complete latest standalone authored scenario definitions, if any, before treating listed concepts as shippable objectives.
- Inspect Unity project source/test harness; no source code was accessible in this documentation-only pass.
- Write executable acceptance harnesses for each fixture and verify on/off-map, save/load, actor relocation, cross-business transfer and ownership changes.
- Add scenario version/change provenance so revised objectives cannot rewrite already earned historical milestones silently.

VI. Package status

This Step 13 document catalogs and organizes scenario evidence. It is NOT a full playable scenario pack, nor a pass/fail record of Unity tests.
