LAND & LEDGERS — STEP 07: TECHNICAL VERIFICATION AUDIT

Date: 8 October 2026 | **Outcome:** Documentation consistency verified for selected architectural invariants, but **full no-loss and current-code certification remain OPEN**. Original Technical XIV remains operative.

Audited materials

Technical XIV — 170 PDF pages across cumulative preserved layers; Step 06 target architecture — 36 authority requirements; Step 05 authority crosswalk — 36 source-traced acceptance tests; Step 02 indexing — 1,880 Technical headings and clauses; Canon XXXI and Step 04 expanded Canon — current versus provisional gameplay context.

Passed checks

- All 36 TECH-CE1-T001 through TECH-CE1-T036 authority identifiers exist once in the enhanced draft.
- All 36 rows point to valid Canon CE1 draft section IDs.
- The current generic-Business, Person attempt, recruitment, transport composition and historical-event settings locks are represented in the crosswalk.
- Cash, inventory, shipment, employment, property and scenario evidence are specified as separate authority boundaries with regression requirements.
- Nine additional technical precision sections carry forward important facility, ledger, legal and material details from preserved Technical XIV.

Not yet demonstrated

- Semantic equivalence across **1,880** technical indexed source anchors cannot be inferred from 1880 lexical candidate mappings; each is explicitly marked UNVERIFIED.
- Runtime class ownership, save schema migrations and regression execution need repository access; no Unity code was changed.
- The documented CreateBlockedShipment(...) defect remains P0 and has not been confirmed fixed.
- The 36 acceptance cases are test *specifications*, not evidence of passing tests.
- Historical law, equipment and cost authoring references still require dated specialist source catalogs.

Decision

Retain Technical XIV as authoritative planning reference while using the Step 07 enhanced successor as a navigable implementation draft. Continue specialist documentation and programmatic trace extraction; do not publish an exclusive replacement until all materially distinct rules are preserved, merged, routed or explicitly superseded, and the high-risk source-of-truth regression fixtures pass in Unity.

Next focus

The next workstream extracts the historical reference catalogs: dated authored events and regimes, law/land/institutions, workforce, construction and economic calibration, all of which currently consume too much of the cumulative core Bibles.
