LAND & LEDGERS

IMPLEMENTATION ROADMAP AND DECISION REGISTER

STEP 14 — WORKFLOW TRACKER

Edition: 2026-10-08 | **Status:** Ready for development use; not evidence of Unity implementation.

I. Authorization and decision status

- 001–105: **approved design direction** from the user's earlier explicit agreement.
- 106–145: **pending distinct gameplay approval**; document them without silently amending Canon for genuinely new mechanics.
- User delegated completion of documentation workflow and waived interim review; this does not transform unverified repository state or missing historical documents into facts.
- Current authority for gameplay is frozen Canon XXXI; for technology planning Technical XIV, until both no-loss and code/source crosschecks are complete.
- The baseline historical references remain immutable under refreshed compatibility sheets.

II. Implementation groups and dependencies

Group	Domain	Priority	Must depend on	Acceptance/test gate
DEV-A	Person/Business/ Property/Ownership single authorities	P0	Repository schema audit	One authority, no labels as permission
DEV-B	EconomicEvent/finance/ inventory atomic transfers	P0	DEV-A	Exactly-once transaction and shipment lineage, save/load
DEV-C	Generic Business + ProductionMethod + tasks	P0	DEV-A/B	Change retail/forge services without type switch
DEV-D	Labor/time/occupation/ worker response	P0	DEV-A/C	No duplicate Person time or identity
DEV-E	Rights/agreements/ finance/banks	P1	DEV-A/B	Owner cash distinct; contingent guarantee and deposits
DEV-F	Routes/freight/stores/rail	P1	DEV-B/C	Physical cargo, route reopening, service vs track
DEV-G	Markets/NPCAI/ migration/households	P1	DEV-A–F	No objective-spawned population or demand
DEV-H	Scenarios/reporting/ historical event toggle	P1	DEV-A–G	Reconciled evidence and repeated time/save stress
DEV-I	Specialty historic datasets/calibration	Rolling	Document references	Jurisdiction/date/source confidence and unit tests

III. Proposal register

Full 145-row register: Companion Step_14_..._145_Proposals.csv with source, status, provisional crosswalk and development gate.

IV. Open release blockers

ID	Severity	Blocker	Gate
REL-001	CRITICAL	Canon no-loss certification	Canon XXXI remains gameplay

			authority
REL-002	CRITICAL	Technical no-loss certification	Technical XIV remains implementation authority
REL-003	CRITICAL	Unity repository evidence	Do not claim code migrated
REL-004	CRITICAL	Shipment duplicate cargo	QA release blocker for provenance objectives
REL-005	HIGH	Scenario runnable definitions	Scenario objective packs are not certified
REL-006	HIGH	Historical statutory tables	Maintain dated legal holds
REL-007	HIGH	Historical calibration coverage	No universal fabricated rates
REL-008	MEDIUM	Research compatibility	Compatibility addenda issued; originals preserved
REL-009	HIGH	Pending 106–145 design directions	Do not silently promote new ideas
REL-010	MEDIUM	Cross-document ID stability	Keep provisional version prefixes

V. Operational follow-on checklist

- Obtain a Unity repository source snapshot and authoritative baseline commit before declaring migration items complete.
- Resolve a blocked cargo shipment without duplicate loaded lots after save/load before trusting provenance-based scenario outcomes.
- Improve the 3,069/1,880 source-anchor concordances into manually verified semantic dispositions for all retained rules.
- Finalize remaining 106–145 proposals only through actual gameplay decision authority rather than treating documentation publication as automatic approval.
- Maintain per-reference history, evidence/uncertainty, checksum and revision date, and never silently overwrite prior revisions.

VI. Completion boundary

Step 14 tracks documentation decisions and implementation readiness; it does not perform or claim Unity code changes.
