Step 02 — Rule Register & Supersession Audit

Review edition • 8 October 2026 | Source baseline: Canon XXXI, Technical XIV, Occupation/Demography 2026-09-25, Historical Work 2026-10-05

SCOPE BOUNDARY: this stage indexes and reconciles documentation only. It does not rewrite either Bible, endorse pending proposals, alter Unity code or assert implemented classes.

Executive determination

Review-ready, not yet signed off. The cumulative revision technique creates substantial duplication and makes older statements easy to mistake for live rules. The governing doctrine is often clear in the latest material, but some cross-revision wording must be resolved explicitly before the Canon is consolidated.

Coverage metric	Result
PDF pages inspected	552
Anchors indexed	5,046
Curated reconciliation chains	50
Decisions / research holds	12
Baseline files	4; SHA-256 matched Step 01 manifest

Interpretation: the 5,046 records represent detected numbered headings, lock statements and substantive bullets, not 5,046 unique game rules. Every PDF page is in the page-coverage ledger. The source PDFs remain the complete source of all prose, tables and examples. Automated dispositions are provisional and do not authorize deletion.

1. Frozen sources and authority

Source	Pages	Authority and compatibility
CAN • Canon XXXI	346	Current gameplay design baseline; last integration dated Oct 7, 2026
TECH • Technical XIV	170	Current technical target baseline; repository evidence still required for actual code
OCC • Occupation report	18	Supplemental 112-profile and 1900/1910-calibrated population reference; cites Canon XXV/Tech VIII
WORK • Historical Work report	18	Supplemental construction/engineering calibration; cites Canon XXVIII/Tech XI

Proposals 001–105 remain approved design direction. Proposals 106–145 remain pending; identifying text resembling them in prior Canon does not silently approve the proposed edits. The original PDFs are unchanged and independently preserved by Step 01.

2. Core authority findings

Business creation

XXXI generic Business + Technical XIV are controlling. CommercialCapability/BusinessOperation may describe what occurs but may not create a permission gate.

Source anchors: CAN p.2–3; TECH p.2; older TECH p.45

Work and hiring

Ordinary task attempts resolve physical prerequisites, while skill affects outcome and Person willingness is separate. Wage employment has one authority; other productive work relationships remain distinct.

Source anchors: CAN p.2–4; TECH p.2–3,45,70

Business and population accounting

Person/residence and transactions remain authoritative; population pressure and customer-demand dashboards must not themselves generate residents or revenue.

Source anchors: TECH p.16,44,70,93–94

Projects and transport

WorkPackage execution, physical logistics and readiness stages govern completion, not building/route/class labels or flat timers.

Source anchors: CAN p.41,74; TECH p.36–40,67; WORK p.2–9

Finance, rights and corporate control

Deposits, guaranties, restricted cash, actual collateral, third-party funded finance and corporation treasury remain distinct from owner liquidity.

Source anchors: CAN p.15–16,116,142; TECH p.10,14,101

Historical authority

Historical event config defaults ON and gates authored regimes, not spontaneous disasters; 1870 historical envelope is active but later-start scenarios remain legitimate.

Source anchors: CAN p.6–7,72; TECH p.6,65; OCC p.2

Scenarios and playtests

Objectives query reality and preserve event/current/maintained semantics; generated scenario numbers are evidence, not global economic constants.

Source anchors: CAN p.2,7; TECH p.6; WORK p.2

3. Major explicit supersession chains

The spreadsheet contains 50 traceable crosswalk entries with older and governing PDF page numbers, verified text excerpts and proposed disposition. The following are the most consequential examples.

BUS-01 — Generic business formation. Any architecture that uses a class or capability record as an independent permission authority is displaced; descriptive multi-activity grouping survives. *[TECH p.45 → CAN p.2; Superseded]*

BUS-02 — Business-operation permission. Rev XIV expressly makes commercial capability records analytical, not permission gates. *[TECH p.45 → TECH p.2; Superseded]*

PER-02 — Ordinary skill attempt gating. Any reading of occupation/capability as a universal hard gate for ordinary work is replaced by physical prerequisites and performance consequences. *[OCC p.8 → CAN p.3; Superseded]*

PER-04 — Employment vs work relationship. Single wage-employment truth is compatible with distinct family, contractor and operator work relationships, but wording needs careful consolidation. *[TECH p.45 → TECH p.70; Merge]*

PER-05 — WorkerSlot duplicate truth. Business WorkerSlot wage/workplace values are not co-equal truth with the Person/employment authority. *[TECH p.70 → TECH p.45; Superseded]*

TOWN-03 — No direct population-to-income. Prior direct demand-pulse to sales mechanisms are not permitted if they bypass real Person/transaction state. *[TECH p.16 → TECH p.70; Superseded]*

CON-01 — WorkPackage authority. Construction progress derives from actual work/resource changes, not progress points or BuildingType timers. *[CAN p.41 → TECH p.37; Merge]*

LOG-01 — Freight custody and inventory. Technical IV reports a serious duplicate cargo defect; it requires a fresh repository audit and regression proof, not only prose changes. *[TECH p.101 → TECH p.2; Research Hold]*

FIN-01 — Bank office vs bank tiers. The history/example can look like a fixed progression even though legal and resource requirements should support alternative entry paths. *[CAN p.15 → TECH p.13; Decision Needed]*

FIN-05 — Unlawful financial actions. Latest summary invokes legal authority as feasibility, while preserved Canon explicitly allows historically possible deliberate unlawful acts; wording needs a three-way feasibility/legality/response separation. *[CAN p.16 → CAN p.2; Decision Needed]*

HIST-02 — Authored events ON/OFF. Governing mechanics remain in core; individual authored event data moves to historical events catalog. *[CAN p.6 → TECH p.6; Merge]*

SCEN-01 — Objectives have no causal authority. Event, current-state and maintained semantics are retained; objective evidence may not manufacture economic state. *[CAN p.7 → TECH p.6; Merge]*

4. Proposed extraction map

The same governing mechanics stay in their relevant core Bible; detailed observations, calibration evidence and scenario particulars move out with source anchors intact. “Move” does not mean erase a governing principle.

Target	Extract / retain	Keep centrally
ACTIVE-01 Canon	Current causal gameplay rules, agency, rights, player freedom, objectives	Source facts/tables remain cited but not embedded at length
ACTIVE-02 Technical	State owners, task/transaction lifecycle, interfaces, save/load, regression requirements	Historical sample rates and implementation backlogs move
REF-01 Historical events	Event definitions, dates, region exposure, evidence confidence, authored triggers	Authored ON/OFF rule remains in core
REF-02 Law and institutions	Dated law, treaty/reservation/public-land rules, bank charter powers	Legal-regime query and freedom doctrine remain in core
REF-03 Occupation / demographic	112 profile descriptions, dated worker data, 1910 bridge-model assumptions	Occupation-is-descriptive and Person/work rules remain in core
REF-04 Work and construction	Historical crews, timings, ranges, engineering anchors and sources	WorkPackage/Task progress and time semantics remain in core
REF-05 Economy / materials	Dated wages, prices, grades, units and source quality	Economic exchange and transaction conservation remain in core
DEV-01 Scenarios / playtests	Scenario definitions, objective fixtures and validation campaigns	Universal objective semantics remain in core
DEV-02 Implementation tracker	Priorities, research holds, 145 proposal statuses, audit/test assignments	No new gameplay authority

5. Decisions and holds to carry forward

These are not approved changes. A few require user design judgment; other holds need research or repository evidence in their scheduled later steps.

D-01 • Physical/legal feasibility vocabulary — Clarify physically possible vs legally authorized vs worker willingness; do not delete deliberate unlawful actions described in Canon XXX.

Disposition: Decision Needed | Preserve both policies; harmonize language in Step 03 only after approval.

D-02 • Finance progression vs capabilities — Clarify finance-office-to-banking-house example is not a prescribed progression or universal deposit-banking unlock.

Disposition: Decision Needed | Retain genuine legal institution forms and date-specific powers.

D-03 • EmploymentRelationship scope — Confirm EmploymentRelationship is wage-employment authority, while family labor, operator and subcontract work use broader WorkRelationship/Agreement semantics.

Disposition: Decision Needed | Avoid both a universal employment catch-all and separate duplicate wage truths.

D-04 • 112 occupation profile freeze — Confirm whether 112 profiles are a 1.0 development scope target or a hard content limit; neither reading may restrict actual skills/tasks.

Disposition: Decision Needed | This is a recommendation in the occupational report, not a mandatory Canon lock.

D-05 • P0 blocked shipment — Technical IV reports a cargo duplication defect; cannot declare it fixed without fresh repository evidence.

Disposition: Research Hold | Preserve regression fixture and schedule repository evidence check for Step 05.

D-06 • Authority versus source preservation — No deletion of old revision paragraphs until the clean Canon and Technical documents pass every trace check.

Disposition: Review Gate | One cited newer override for each actual supersession.

D-07 • Historical event toggle boundary — Keep named historical-event toggle separate from statehood, legal chronology, geography and emergent disasters.

Disposition: Review Gate | Detailed event catalog deferred to Step 08.

D-08 • Occupational calibration dated priors — Keep 1900 values and extrapolated 1910 breakdown labeled as late-period/bridge estimates, not automatic 1870 distributions.

Disposition: Research Hold | Historical research recalibration deferred to Step 10.

D-09 • Source report compatibility metadata — Occupation report references Canon XXV/Tech VIII; work report references Canon XXVIII/Tech XI, without diminishing their primary research.

Disposition: Research Hold | Revise report front matter at Steps 10 and 11.

D-10 • Proposals 106–145 remain pending — Pending proposal list cannot be promoted to active Canon merely because a similar rule already appears in older source text.

Disposition: Review Gate | Approved 1–105; pending 106–145 until user instruction.

D-11 • Date-specific legal dataset — Do not turn dated banking, public-land and jurisdiction-specific rights into one hardcoded default.

Disposition: Research Hold | Reference authoring/verification deferred to Step 09.

D-12 • No claimed code implementation — Technical XIV states conceptual architecture; determine actual class/storage truth through separate repository audit.

Disposition: Research Hold | Step 05 required; no repository code viewed in Step 02.

6. Verification and approval gate

Status	Test / condition
PASS	Four current baseline PDFs were hashed and matched the frozen Step 01 manifest; no edited source files.
PASS	Every source PDF page has a coverage record, including two cover pages without extractable anchor headings.
PASS	5,046 heading/lock/bullet anchors indexed with source, page, provisional routing and excerpt.
PASS	50 curated override/consolidation relationships have directly checkable source pages and excerpts.
PASS	User proposal statuses preserved: 1–105 approved direction; 106–145 pending.
OPEN	Twelve decision/research items are retained; four wording/content questions require the user's approval or explicit deferral.
NOT IN SCOPE	No Unity repository inspection or implementation-status validation was performed.
GATE	Do not start Step 03 until user accepts the Step 02 register and how open decisions are handled.

Recommended approval language: "Approve Step 02 audit and its source/register structure; keep D-01 through D-04 open or resolve them explicitly before writing Step 03; retain D-05 through D-12 as scheduled holds."

Deliverables: editable XLSX register, CSV/JSON source-trace ZIP and this review memorandum. The original source PDFs stay frozen and are not replaced by these artifacts.
