LAND & LEDGERS — STEP 04: CANON NO-LOSS VERIFICATION

Edition: Source-faithful audit memo 1.0 | **Date:** 8 October 2026

Scope: Canon XXXI (346 pages), Technical XIV (170 pages), Occupation and Demography (18 pages), Historical Work and Construction (18 pages), Step 02 registers, Step 03 consolidated Canon draft.

Outcome: PARTIAL / NOT RELEASE-CERTIFIED. Targeted omissions were recovered; a complete source-clause-by-source-clause equivalence sign-off is **not yet justified**. The 346-page Canon XXXI remains the binding gameplay source until that closure.

Executive decision

The 29-page Step 03 Canon is a sound **structural synthesis**, but compression of a cumulative 346-page corpus into about 10,700 words does **not** prove every consequential exception survived. It cannot safely be promulgated as a lossless replacement solely on the basis of the 105-proposal mapping. Rather than silently delete detailed rules, this audit preserved Canon XXXI as current authority, produced a stronger v0.2 draft and classified incomplete traceability transparently. The user has delegated workflow approvals, **not** authorized misrepresenting uncertain migration as complete.

The v0.2 draft preserves every section of Step 03, introduces **19 targeted source-backed sections**, and retains the original 105 approved proposal mapping; its current **101** numbered rules remain **provisional**. Proposals 106–145 were not automatically converted into new gameplay law.

Evidence inventory and mechanical checks

- Source corpus: **552 PDF pages**, consisting of 346 Canon + 170 Technical + 18 Occupation + 18 Work/Construction pages.
- Step 02 anchor inventory: **5,046** indexed headings/locks/clauses across four source PDFs, of which **3,069** derive from the cumulative Canon.
- Automated Canon anchor-to-section concordance: **3,069 tentative lexical mappings** to the Step 03 Canon's 82 original sections; these are search aids, not entailment judgements.
- Concordance with low lexical overlap (<0.05): **223** anchor rows, including index/heading and legacy-revision material; low similarity neither proves omission nor establishes supersession.
- Curated authoritative overrides from later revisions: **13** source-to-draft chains checked for clear governing intent.
- Selected consequential details or precision risks: **18** audit records, of which 19 discrete Canon sections were written (additional lifecycle rule included).
- Original 105 approved proposals: verify that each pre-existing destination remains addressable; the mapping does not by itself prove all source subclauses survived.

Findings requiring explicit preservation

Case	Canon provision	Source evidence	Mitigation
Grain warehouse receipts	CAN-CE1-07.6	Canon XXXI PDF p.28, preserved XXIX	Restore grade, custody, title and document rights
Commission merchant transactions	CAN-CE1-07.7	Canon XXXI PDF p.89	Preserve consignment without fictional merchant ownership
Commercial memory	CAN-CE1-13.5	Canon XXXI PDF p.299	Distinguish personal, relational, recorded and procedural memory
Bankruptcy legal transition	CAN-CE1-12.7	Canon XXXI PDF pp.30–32	Retain the 1878–1898 federal bankruptcy gap

Mail and package chronology	CAN-CE1-10.6	Canon XXXI PDF p.77	Preserve actual freight and no 1870–1905 Parcel Post
Construction security/claims	CAN-CE1-06.6	Canon XXXI PDF p.46	Carry bonds, liens and physical continuity
Cooperative ownership	CAN-CE1-12.8	Canon XXXI PDF p.30	Member capital/ownership, no magic bonus
Farm and livestock seasonal economics	CAN-CE1-08.6	Canon XXXI PDF p.89	Causal seasonal supply rather than monthly prices
Chattel security	CAN-CE1-12.9	Canon XXXI PDF p.29	Instrument-specific collateral and enforcement
Indigenous/federal land status	CAN-CE1-05.6	Canon XXXI PDF pp.23–27	Preserve treaty, reservation, claims and real title distinctions
Inventory integrity	CAN-CE1-07.8	Technical XIV preserved Revision IV; Canon physical doctrine	No double stock; known implementation defect remains open
Historical calibration provenance	CAN-CE1-18.4–18.5	Both specialist reports pp.1–2	Distinguish direct observation, estimates and normative rules
Household/estate and dependent continuity	CAN-CE1-04.5	Canon XXX and preserved Technical lifecycle	Preserve real Persons and relationships through loss and displacement

The supplement is deliberately narrow: detailed numerical historical research stays in its specialist reference, whereas rules governing what the simulation may do remain in the Canon.

Supersession resolutions

Current Canon governs the **1870–1905** normal Open Frontier horizon; older 1880-start references are archived scenario/historical context, not equal authority. Current Canon treats Business labels and occupations as descriptive, forbids capability flags as replacement business classes, allows novice ordinary production attempts subject to physical conditions and independent Person response, and requires physical settlement, not objective or dashboard magic. Specific legal institution powers and property rights remain genuine distinctions.

The four prior decision questions are resolved by **reading existing higher-priority rules**, not by adopting new mechanics: (1) possible versus lawful versus willing are distinct, including supported deliberate illegality; (2) finance office to deposit bank is an optional systemic route rather than a tier ladder; (3) EmploymentRelationship owns conventional employment but does not absorb family/independent/owner work into artificial wages; (4) 112 occupation profiles are a recommended scope/calibration catalog and not a hard class permission system.

Residual risks and release blockers

1. **Full semantic no-loss proof remains open:** many indexed anchors are headings, repeated revision clauses or bullet excerpts and the current automated concordance cannot distinguish actual retention, legitimate supersession or omission.
2. **No current repository audit:** Technical XIV describes target responsibilities and a confirmed historical blocked-shipment risk, but this document pass does not prove present Unity behavior.
3. **Historical legal detail still needs authored period datasets:** specialized reference steps must confirm geographic/date scope rather than creating unsupported global rules.
4. **High-resolution historical data is not yet fully extracted:** the specialist reference refreshes are scheduled; retain the original PDFs in the archive until these have verified trace maps.
5. **Ambiguous supersession remains reviewable:** if older text describes a distinct lawful institution, task method or ownership relationship, it must not be removed just because a newer general principle sounds similar.

Gate outcome and safe continuation

Step 04: completed as a substantive audit pass; full replacement release gate remains OPEN. Proceed with Step 05's architecture crosswalk and specialist extraction in parallel, but **do not label the shortened Canon an authoritative lossless replacement** until every meaningful rule has a Keep/Merge/Move/Explicitly Superseded disposition and source-citation path. No Unity code changes were made.

Deliverables: Step 04 expanded Canon Markdown; this audit report; 3,069-row automated triage (explicitly unverified); 13 curated supersession chains; 18 itemized detail gaps; separate source archival baseline.
