LAND & LEDGERS — STEP 05: TECHNICAL AUTHORITY AND CODE-EVIDENCE CROSSWALK

Date: 8 October 2026 | **Status:** Target architecture map; **no live Unity repository review performed**.

Objective and limits

This stage maps intended Canon behavior onto technical state responsibilities, persistence boundaries and practical regression tests. Its 36 source-traced rows are **requirements** derived from Canon XXXI, Technical XIV and both reference reports; names of authorities are **conceptual**, not claims that equivalent Unity types currently exist. The existing repository-baseline authority audit recorded in Technical XIV is used as a risk input, not silently represented as current verified code.

Highest-risk authority boundaries

- **Cash and ledger:** Business cash, owner cash, deposit liabilities, debt and economic events must each have one economic truth; reports classify or reconcile rather than create balances.
- **Shipment and inventory:** Source stock, staged cargo, loaded cargo, returned stock and destination receipt cannot count the same goods twice. The documented `CreateBlockedShipment` defect is a P0 verification/fix target.
- **Person labor:** One Person identity and exclusive time allocation; EmploymentRelationship authority distinct from nonwage family work, contracts and owner actions.
- **Property:** Parcel title/rights, Building, FunctionalSpace, lease/occupancy/tenancy and commercial use never collapse into one business-use boolean.
- **Business:** A generic Business's permissible production and selling arise from the actual resources and legal/economic relationships rather than archetype flags.
- **Scenarios:** Objective results and saved checkpoints only read authoritative evidence; historical-event toggles are persistent and do not suppress organic adversity.

Acceptance workflow

1. Audit repository classes and save formats, then place the **exact code path, commit, test and implementation status** alongside each mapping.
2. For every duplicate authority, choose one writer and define the reconciliation/migration strategy; do not invent new cross-system state pools.
3. Implement and run tests in priority order, especially P0 shipment conservation, cash and physical Person/task time invariants.
4. Reject feature completeness claims that rely only on the presence of conceptual names in Technical XIV.
5. Perform Step 06 only with explicit status markers distinguishing Target, Confirmed, Legacy, Partial, Blocked and Unknown.

Crosswalk catalog

ID	Domain	Canon	P	Key invariant
T001	Business authority	CAN-CE1-02.1	P0	BusinessOperation / BusinessType must not grant permissions
T002	Person identity	CAN-CE1-03.1	P0	Age/occupation/job changes preserve same PersonId
T003	Employment	CAN-CE1-03.4	P0	No split independent wage/employer/job truth;

				nonwage work separate
T004	Work attempt and response	CAN-CE1-03.2	P0	Physical attempt distinct from skill/occupation; Person can refuse
T005	Physical and person time	CAN-CE1-03.3	P0	No incompatible simultaneous labor, commute, shopping or management
T006	Shared resource reservations	CAN-CE1-06.1	P0	No cross-domain double booking
T007	Production methods	CAN-CE1-06.2	P0	No recipe whitelist from BusinessType
T008	Cash balances	CAN-CE1-02.3	P0	No report/UI cash as second posting authority
T009	Economic events and exact settlement	CAN-CE1-02.4	P0	Known amounts exact and immutable; correction explicit
T010	Shipment integrity	CAN-CE1-07.8	P0	No fabricated loaded cargo with restored seller stock
T011	Inventory location and offers	CAN-CE1-07.1	P0	Cannot sell absent stock or duplicate display+warehouse capacity
T012	Supplier procurement	CAN-CE1-07.2	P1	No anonymous item->infinite instant stock
T013	Storage capacity	CAN-CE1-07.3	P0	Warehouse identity does not create empty storage
T014	Ownership vs custody	CAN-CE1-07.6	P1	Holding customer grain does not transfer title
T015	Land rights	CAN-CE1-05.4	P0	Unoccupied parcel not free title
T016	Buildings, premises and use	CAN-CE1-05.2	P0	Building type does not dictate business identity
T017	Construction project lifecycle	CAN-CE1-06.4	P0	Not one building-type timer, and completion separate from use
T018	Asset wear and repair	CAN-CE1-06.3	P1	Condition and known defects not one universal HP
T019	Household and accommodation	CAN-CE1-04.1	P0	No independent settlement resident counter
T020	Demographic lifecycle	CAN-CE1-04.5	P1	Death does not erase estate/assets/dependents
T021	Migration	CAN-CE1-04.3	P0	Housing never spawns migrant Persons
T022	Information and knowledge	CAN-CE1-13.4	P1	No reveal of unobserved true skills/intent
T023	Recruiting contact graph	CAN-CE1-03.5	P0	No omniscient applicant pool
T024	Demand and Opportunity	CAN-CE1-11.3	P1	No direct spawning based on town score
T025	Market transaction embodiment	CAN-CE1-07.4	P0	No revenue from settlement population multiplier
T026	Transport graph	CAN-CE1-10.1	P1	No geometric teleport or capacity-free offmap
T027	Rail lifecycle and corporate ownership	CAN-CE1-10.3	P1	Track laid != commercially open service

T028	Historical technology	CAN-CE1-10.5	P1	TechnologyDefinition not global unlock flag
T029	Financial debt and guarantee	CAN-CE1-12.4	P0	Selling business does not delete seller guaranty
T030	Bank and deposit liability	CAN-CE1-12.5	P0	Deposits not free owner cash
T031	Corporate governance	CAN-CE1-12.3	P1	No player treasury grab from minority company
T032	Delegation and owner locks	CAN-CE1-13.2	P0	No +efficiency automation, owner-locked sale remains reserved
T033	Historical event settings	CAN-CE1-15.2	P1	Off authored event does not block endogenous incident
T034	Scenario objective evidence	CAN-CE1-16.2	P0	Goal observes, never manufactures physical state
T035	Save/load and event idempotence	CAN-CE1-16.4	P0	No duplicate event on reload or time fast forward
T036	Research references	CAN-CE1-18.5	P1	No universal hard-coded wage/quantity from anecdote

Evidence status for all 36 rows: UNVERIFIED against current repository; source-traced intended architecture only.
