Land & Ledgers — Rolling Documentation Release v3.1

Studio: Deadscripts Interactive
Release date: November 4, 2026
Format: Single installable ZIP, original governing Bibles + dated post-Canon decision layer.

What is newly incorporated

- 97 November 4 owner-design sections; every entry separately classified and source routed.
- 24 explicit exclusions preventing examples and observed prototype numbers from becoming global Canon.
- Three realism styles stored as a working owner preference.
- Reconciliation lists already covered/new/clarified/open/conflicting decisions and later Codex implications.
- Updated active specialist references for human playtest evidence, legal-research gaps and economic development priorities.
- Original Canon XXXI (346 pages) and Technical XIV (170 pages) preserved **unchanged**, with complete AI-readable text beside each PDF.

Authority and release qualification

Canon XXXI controls existing gameplay. Technical XIV is subordinate. Dated approved design decisions add scoped updates, not wholesale rewritten rules. 001–105 remain approved; 106–145 remain pending as numbered proposals. New overlapping confirmed user statements are scoped independently.

No Unity game code was modified, no live Unity implementation was tested, and the prior exhaustive semantic no-loss gate remains open.

Find your document

Read 0000_START_HERE_READ_ME_FIRST.md, AGENTS.md, 0003_AUTHORITY_PRECEDENCE_AND_STATUS.md, 0001_DOCUMENT_ROUTER.csv. Then use the 97-entry decision document in 02_APPROVED_AND_SOURCE_BACKED_UPDATES/.

This is a rolling documentation edition, not a final project specification.
