Land & Ledgers — Post-Canon User Design Decisions

Rolling documentation edition: v3.1 · 2026-11-04
Studio: Deadscripts Interactive
Source: User-supplied *Comprehensive User Design Decision Handoff*, November 4, 2026.
Authority: Dated user-approved decisions supplement complete Canon XXXI; Technical XIV remains subordinate. These are documentation requirements, not permission to edit code.

Critical boundaries

- The original 346-page Canon XXXI and 170-page Technical XIV PDFs remain unchanged and governing for earlier rules. Omission from this register cannot repeal them.
- Proposals 001–105 remain approved within evidenced scope; 106–145 remain pending **as numbered proposals**. A newly expressed, independently confirmed user decision can overlap a pending proposal without approving that proposal wholesale.
- A user-supplied report of what a development build currently does is evidence of the user report, **not an independent Unity verification**.
- Numbers in illustrative examples and provisional development fixtures are not universal Canon calibration.
- CONFIRMED USER DECISION carries the user's stated mechanics, reconciled narrowly to existing law, worker agency, legal title and non-duplicated authority. USER DESIGN PREFERENCE does not itself finalize architecture or numerical thresholds. OPEN DESIGN QUESTION remains unresolved. IMPLEMENTATION OR PLAYTEST OBSERVATION is not a shipped-feature claim.
- Existing Canon XXXI specifies that ordinary, physically feasible production can be **attempted** without occupation gating. Skilled output and specialist/legal prerequisites still matter. The blacksmith note is interpreted accordingly.

Evidence method: Each entry is traced to the explicit November 4 user handoff. Listed Canon/Technical pages are **topic-level search routes** into original PDFs, not claims of a clause-by-clause identical rule or exhaustive semantic certification.

Part 1 — Overall design philosophy

1.1 — Realism and historical plausibility

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Ask what people in this period with this information, incentives and material constraints would actually do; favor causation over scripted gamification and research dated historical claims.
Limits and examples: Philosophical principle, not a numeric rule.
Related source routes: CAN-XXXI pp. 1–3, 114, 194; TECH-XIV pp. 1–4, 88.

1.2 — Independent world evolution

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: People, business ownership, employees, property uses, leases, debt, buildings and opportunities must change through real processes over decades; startup data never resets live state.
Limits and examples: No immutable opening-town assignment.
Related source routes: CAN-XXXI pp. 1–3, 114, 194; TECH-XIV pp. 1–4, 88.

1.3 — Player-NPC economic parity

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: NPCs share the player's physical, economic, property, contract, labor, lending, investing and business-formation authorities, subject to their actual knowledge, resources and judgement.
Limits and examples: No player-only entrepreneurship or investment privileges.
Related source routes: CAN-XXXI pp. 1–3, 114, 194; TECH-XIV pp. 1–4, 88.

1.4 — No scripted success or protection

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Do not protect a business, impose market shares, or predetermine economic winners to satisfy a scenario; actors survive, adapt or fail through actual economics.
Limits and examples: Exceptions for bounded development fixtures cannot become world rules.
Related source routes: CAN-XXXI pp. 1–3, 114, 194; TECH-XIV pp. 1–4, 88.

1.5 — Meaningful choices

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Offer distinct interactions only if they meaningfully differ in money, obligations, rights, risk, access, time, relationships or legality; avoid decorative option overload and verbose explanations.
Limits and examples: Function and consequence precede cosmetic UI.
Related source routes: CAN-XXXI pp. 1–3, 114, 194; TECH-XIV pp. 1–4, 88.

Part 2 — Business failure and financial distress

2.1 — Permanent NPC business failure

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Any firm may close permanently when no viable lawful economic path remains; being the only local supplier is not immunity.

Limits and examples: A bakery may fail and create unmet demand for another entrant.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.2 — Gradual financial distress

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Financial difficulties unfold through cash strain, attempts to adapt, renegotiation, borrowing, layoffs, equipment or real-estate sales, restructuring and possibly shutdown rather than immediate automatic deletion.
Limits and examples: Choice depends on owner judgement and funds; these are possible responses, not mandatory stages.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.3 — Borrowing into distress

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Some people double down and borrow against hoped-for recovery while others liquidate early; flawed judgement and distinct personalities affect the path until lenders refuse.
Limits and examples: Loans remain real liabilities; no unlimited credit.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.4 — Independent lender underwriting

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Creditors judge borrower, collateral, income, obligations and credit risk using their legitimate evidence and legal authority; refusal, default and enforcement have causal consequences.
Limits and examples: No invisible debt reset.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.5 — Distress asset liquidation

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: An owner can sell actual transferable inventory, horses, wagons, equipment, buildings, land or business interests to raise cash, potentially at distressed prices; liens, leases and other rights survive.
Limits and examples: Sell only what the principal owns or may transfer.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.6 — Distressed business acquisitions

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: A struggling owner can approach known people for a loan, new

investment, or purchase discussion, and buyers can investigate commercial viability, assets, relationships and vertical integration without scripted offers.
Limits and examples: Glen and Bakery are illustrative actors, not mandated outcomes.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.7 — Business due diligence and imperfect records

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Prospective buyers can seek books, cash, revenues, expenses, inventory, equipment, debt, obligations, tenure, contracts and prospects through lawful access; information quality, incomplete books and access limits affect confidence and terms.
Limits and examples: No omniscient private-business finances.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.8 — Seller financing

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: A legitimate sale may combine cash with seller-carried promissory notes, interest, schedules, collateral and default remedies; record real lender and borrower rights.
Limits and examples: Seven percent for three years is illustrative only.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.9 — Person persists after business failure

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Failure or dispossession must not delete the former owner or erase acquired skills, relationships, needs and options; they can seek work, change field, move or found another firm.
Limits and examples: Bakery occupation example is not a fixed character path.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

2.10 — Flight and extreme distress

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED / RESEARCH HOLD
Decision / retained scope: Severe distress may cause flight from creditors or deprivation, including food insecurity; disappearance does not cancel debt, title, liens, custodial obligations or jurisdictional enforcement.
Limits and examples: Exact historical flight, enforcement, food insecurity and mortality treatment needs research; no scripted starvation.
Related source routes: CAN-XXXI pp. 15–16, 30, 105, 242; TECH-XIV pp. 9–13, 20, 26–28.

Part 3 — NPC entrepreneurship

3.1 — NPC business formation

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: A Person with viable resources, opportunities, knowledge and access may establish a generic enterprise, lease space, acquire stock and hire labor.
Limits and examples: Shane and $300 saloon start are examples, not startup thresholds.
Related source routes: CAN-XXXI pp. 2–3, 7–8, 105, 194; TECH-XIV pp. 2, 4, 88, 158.

3.2 — Opportunity discovered from evidence

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: NPCs notice actual shortages, prices, customer travel, weak service, unused assets, rentable space, labor supply, trade and cash opportunities; firms do not spawn from an arbitrary timer.
Limits and examples: Opportunity is a read model over economic state.
Related source routes: CAN-XXXI pp. 2–3, 7–8, 105, 194; TECH-XIV pp. 2, 4, 88, 158.

3.3 — Skill changes outcomes, not generic access permissions

Classification: CONFIRMED USER DECISION
Reconciliation: CONFLICT RESOLVED BY SCOPE
Decision / retained scope: A blacksmith needs substantial skill for safe, timely high-quality output; an untrained operator cannot instantly produce masterwork, but Canon XXXI still permits physically feasible ordinary attempts; enterprise owners may instead hire skilled workers.
Limits and examples: Do NOT invent a universal BlacksmithClass hard gate. Specialist methods and law may impose separate physical or legal prerequisites.
Related source routes: CAN-XXXI pp. 2–3, 7–8, 105, 194; TECH-XIV pp. 2, 4, 88, 158.

3.4 — Periodic economic evaluation

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: Persons, households and firms periodically consider cash, debt, essential needs, employment, consumption, savings, expansion, asset investment and business creation through their proper authorities.
Limits and examples: No parallel shadow wallet or fictional balance.
Related source routes: CAN-XXXI pp. 2–3, 7–8, 105, 194; TECH-XIV pp. 2, 4, 88, 158.

3.5 — Rename vague pressure label

Classification: USER DESIGN PREFERENCE
Reconciliation: OPEN NAMING REVIEW
Decision / retained scope: Avoid the generic label Pressure for user-facing or architectural concepts when a precise name such as unmet demand, cash strain, service gap, scarcity or

opportunity is available.
Limits and examples: Do not blindly rename all code uses or remove the real economic causes.
Related source routes: CAN-XXXI pp. 2–3, 7–8, 105, 194; TECH-XIV pp. 2, 4, 88, 158.

Part 4 — Customers and competition

4.1 — Customer purchasing decisions

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Purchase quantity, supplier choice and loyalty derive from price, availability, quality, travel, reliability, relationships, needs and budget together.
Limits and examples: Price is not the only axis.
Related source routes: CAN-XXXI pp. 7, 185, 194; TECH-XIV pp. 26, 88.

4.2 — Quantity constrained competing bakeries

Classification: ILLUSTRATIVE EXAMPLE
Reconciliation: ILLUSTRATIVE ONLY
Decision / retained scope: A buyer may buy from a cheaper seller until real stock runs out and buy the remainder from a higher priced seller; larger customers may split orders across vendors.
Limits and examples: Bread at 6 cents and 8 cents is not calibration authority.
Related source routes: CAN-XXXI pp. 7, 185, 194; TECH-XIV pp. 26, 88.

4.3 — Experience and supplier relationships

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Satisfactory quality, timely delivery, shortages, bad service and repeat interactions change relationship evidence and future buying preferences.
Limits and examples: Preferences arise from experience, not flat random loyalty.
Related source routes: CAN-XXXI pp. 7, 185, 194; TECH-XIV pp. 26, 88.

4.4 — Causal competition

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Businesses can change price, capacity, sourcing, quality, reliability, services or customer relationships in response to genuine competitors; never assign fixed market shares.
Limits and examples: Customers retain agency and purchasing limits.
Related source routes: CAN-XXXI pp. 7, 185, 194; TECH-XIV pp. 26, 88.

Part 5 — Personality and risk tolerance

5.1 — Individual risk profiles

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: Persistent but modifiable individual risk tolerance and preferences influence debt, opportunity, saving and expansion decisions.
Limits and examples: Avoid treating a Person as an immutable archetype.
Related source routes: CAN-XXXI pp. 105, 114, 194; TECH-XIV pp. 88, 158.

5.2 — Personality interacts with context

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Even a risk-seeker evaluates actual cash, dependants, debt, collateral, experience and available opportunities; a cautious person may still accept well-supported risk.
Limits and examples: Preferences influence choice without determining every outcome.
Related source routes: CAN-XXXI pp. 105, 114, 194; TECH-XIV pp. 88, 158.

5.3 — Human imperfect judgment

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: NPC forecasts and reactions may be mistaken, overconfident, fearful or biased according to actual evidence and character; they are not omniscient perfect optimizers.
Limits and examples: Do not equate error with arbitrary decision RNG detached from evidence.
Related source routes: CAN-XXXI pp. 105, 114, 194; TECH-XIV pp. 88, 158.

5.4 — No automatic IQ penalty

Classification: OPEN DESIGN QUESTION
Reconciliation: EXPLICITLY NOT APPROVED
Decision / retained scope: Do not establish an era-wide, social-class, racial or demographic intelligence deficit from speculation about nutrition; any health/development model needs separate historical evidence and approval.
Limits and examples: Prohibited from automatic Canon promotion.
Related source routes: CAN-XXXI pp. 105, 114, 194; TECH-XIV pp. 88, 158.

Part 6 — Horses, wagons, equipment transactions

6.1 — Unsolicited asset offers

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: A player or NPC may approach an identified owner with an offer

on an asset not publicly listed; actual ownership, authority, willingness and counteroffer determine whether it proceeds.
Limits and examples: Not For Sale is an expression of willingness, not an absolute interaction prohibition.
Related source routes: CAN-XXXI pp. 5–6, 183, 257; TECH-XIV pp. 4–5, 79.

6.2 — Asset utilization and reservation value

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Productive utilization, expected income loss and replacement difficulty increase the cost of parting with a horse, wagon or other equipment.
Limits and examples: 33 percent and 50 percent usage thresholds were brainstorming only.
Related source routes: CAN-XXXI pp. 5–6, 183, 257; TECH-XIV pp. 4–5, 79.

6.3 — Price versus owner value

Classification: ILLUSTRATIVE EXAMPLE
Reconciliation: ILLUSTRATIVE ONLY
Decision / retained scope: Above-market offers may become persuasive as compensation for sacrificed production, but willingness is not a fixed premium lookup independent of cash needs or replacement cost.
Limits and examples: $200 market value and $220/$250/$300 offers are examples only.
Related source routes: CAN-XXXI pp. 5–6, 183, 257; TECH-XIV pp. 4–5, 79.

6.4 — Cash position modifies seller willingness

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Financially secure owners usually need more reason to sell useful assets, while overleveraged owners may liquidate underused or even productive assets; combine utilization, debt, cash, risk and market availability.
Limits and examples: Do not reduce to a single seller threshold.
Related source routes: CAN-XXXI pp. 5–6, 183, 257; TECH-XIV pp. 4–5, 79.

6.5 — Asset ownership versus access

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Buying, borrowing, renting, leasing, hiring an operator and commissioning a service create distinct ownership, custody, permission, cost and liability relationships.
Limits and examples: Physical equipment can enable work without legal title changing.
Related source routes: CAN-XXXI pp. 5–6, 183, 257; TECH-XIV pp. 4–5, 79.

6.6 — Equipment rentals and lease terms

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED

Decision / retained scope: Allow historically supported short- and long-term access to horses, wagons and tools through legitimate agreement terms instead of forcing ownership for temporary jobs.
Limits and examples: No automatic minimum period for all rentals.
Related source routes: CAN-XXXI pp. 5–6, 183, 257; TECH-XIV pp. 4–5, 79.

6.7 — Renter damage and disputes

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED / RESEARCH HOLD
Decision / retained scope: Renter and owner allocation of loss, maintenance, damage, wear and repairs follows negotiated agreement, evidence and dated law; the renter may carry liability where contracted.
Limits and examples: User's general renter-responsibility preference is not a universal default that overrides terms.
Related source routes: CAN-XXXI pp. 5–6, 183, 257; TECH-XIV pp. 4–5, 79.

Part 7 — Property and business purchases

7.1 — Separate property and business title

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Track ownership of fee title, buildings, goods, equipment and business interests separately from leases, management, tenancy, occupancy and rights of use.
Limits and examples: One Business identity does not automatically own its premises.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257–258; TECH-XIV pp. 4, 20, 88, 164.

7.2 — Business purchase excludes third-party property

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Acquiring an operating Bakery does not convey the landlord's building or land; any real estate transfers only if the actual owner agrees and can lawfully convey it.
Limits and examples: Treat tenant lease rights and asset purchase as separate transaction scope.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257–258; TECH-XIV pp. 4, 20, 88, 164.

7.3 — Negotiated acquisition scope

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Negotiated transactions may transfer some inventory, tools, whole enterprise, partial interest, owned buildings, land and selected liabilities; verify ownership, approvals, liens and contract assignment.
Limits and examples: Partial ownership is a permitted subject of negotiation, but detailed governance stays under existing Canon.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257–258; TECH-XIV pp. 4, 20, 88, 164.

7.4 — Enterprise value versus real estate

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: An operating business value depends on assets, goodwill, current and prospective profits, workers, contracts, reputation and obligations; appraisals and property values remain distinguishable.
Limits and examples: Do not double count real estate or write debt out of valuation.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257–258; TECH-XIV pp. 4, 20, 88, 164.

Part 8 — Buildings, rooms and outfitting

8.1 — Editor-authored initial settlement

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Build the initial town as Unity-authored physical plots, roads, structures and seed assignments; after initialization the simulation owns runtime transitions.
Limits and examples: Do not continuously reapply authoring assignments.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.2 — Stable Building identity

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: Every Building gets a stable distinct identifier independent of occupant, use, owner or business identity.
Limits and examples: Building 001 is illustrative.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.3 — Inspector layout presets

Classification: CONFIRMED USER DECISION
Reconciliation: NEW AUTHORING REQUIREMENT
Decision / retained scope: A Unity Inspector layout selection can initialize a physical room configuration such as five rooms but must never act as an immutable business/residential class.
Limits and examples: Editor-only convenience; source is current handoff, no Unity implementation claim.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.4 — Rooms as physical spaces

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: Rooms/FunctionalSpaces have dimensions, position, entry/access, capacity and other physical attributes; template labels do not impose permanent usage restrictions.

Limits and examples: Do not collapse many rooms into one universal abstract Building slot.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.5 — Outfitting enables activity

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Actual beds, counters, oven, ventilation, furnishings and associated labor/rights determine whether a space supports lodging, baking, storage or another activity; unfurnished rooms are not functional bedrooms by default.
Limits and examples: Five-room boarding house example: office + kitchen + three unfurnished spaces may be refitted.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.6 — Equipment footprint and safety

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Station equipment must physically fit with access, work area and required conditions; capacity, ventilation, fire exposure and dated law constrain activity without arbitrary RoomType permissions.
Limits and examples: Specific geometry and safety resolution need technical calibration.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.7 — Multiple households and uses per Building

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: One Building may host multiple lawful households, separate residential units and independent businesses through distinct FunctionalSpace and occupancy/use relationships.
Limits and examples: Reported accepted user decision from this handoff.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.8 — Starting assignment modes

Classification: CONFIRMED USER DECISION
Reconciliation: NEW AUTHORING REQUIREMENT
Decision / retained scope: Editor starting-use choices are Automatic, Assigned and Vacant; each seeds an initial occupancy relationship and cannot control future live occupancy.
Limits and examples: Reported acceptance of earlier assistant proposal, confirmed here.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.9 — Starting identity selections

Classification: CONFIRMED USER DECISION
Reconciliation: NEW AUTHORING REQUIREMENT
Decision / retained scope: Initial Assigned choices reference the actual configured starting Business or Household identities and reject incompatible exclusive double assignments.

Limits and examples: No duplicate business/household authorities created in the Inspector.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.10 — Runtime room and building changes

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: After startup, ownership, room tenants, furnishing, business location, expansions, leases, renovation and construction all evolve through live state, unaffected by original template settings.
Limits and examples: Seed definitions are not a forced daily reset.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.11 — Property owner distinct from business tenants

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Landlords may lease rooms to many independent operators; owner-operated, mixed-use and multi-firm arrangements follow specific rights and usable spaces.
Limits and examples: A shop occupant cannot convey its landlord's title.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.12 — Interior grid resolution

Classification: OPEN DESIGN QUESTION
Reconciliation: OPEN CALIBRATION
Decision / retained scope: Consider an independent fine interior placement grid to suit furnishings; do not constrain small objects to the approximately 2 m exterior planning grid.
Limits and examples: 0.5 m grid is a suggestion, not approved final resolution.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.13 — Staged interior simulation

Classification: CONFIRMED USER DECISION
Reconciliation: STAGED DESIGN DIRECTION
Decision / retained scope: Allow logical interior work and occupancy now without full 3D displayed interiors; later visibility and close-camera interior representation should build on the same functional state.
Limits and examples: Art/detail must not block foundational economy.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

8.14 — Road hierarchy in Editor

Classification: USER DESIGN PREFERENCE
Reconciliation: AUTHORING PREFERENCE
Decision / retained scope: Organize road segments under named streets in a Transportation/Roads hierarchy so the Unity Editor is usable; do not invent a parallel road/network runtime authority.

Limits and examples: Main Street/Mill Street/Bank Street/River Road are illustrative names.
Related source routes: CAN-XXXI pp. 3, 5, 16, 257; TECH-XIV pp. 2, 4, 88.

Part 9 — Freight and physical travel

9.1 — Physical freight lifecycle

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Procurement, assigned freight responsibility, negotiation, asset preparation, travel, loading, shipment, unloading, custody, acceptance and settlement are distinct events and costs.
Limits and examples: Buying flour must not teleport it into Bakery stock.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.2 — Multiple transport choices

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Legitimate parties can contract for supplier delivery, buyer pickup, self-haul, third-party carrier, owned fleet, rental equipment or hired staff; intelligent defaults do not remove choice.
Limits and examples: Actual equipment and rights decide feasibility.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.3 — Self-haul uses real resources

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Self-haul avoids a carrier fee but consumes worker time, animals, vehicles, feed, journey time, maintenance and forgone opportunities.
Limits and examples: Consolidated economics cannot invent zero-cost owned transport.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.4 — Plausible NPC negotiations

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: A Person may visit a service provider, ask an associate or use period handbills, notices and formal communication; awareness must spread by legitimate channels.
Limits and examples: Glen visits Ethan as an example, not universal path.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.5 — Verbal freight agreements

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Ordinary freight agreements may be oral; the simulation records

principals, terms, cargo, price, obligations and evidence even if no written instrument exists.
Limits and examples: Dispute proof may differ from a signed writing; subject to period law.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.6 — Prototype direct negotiation timing

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: PROVISIONAL CALIBRATION
Decision / retained scope: Use five minutes as the current illustrative startup Glen/Ethan direct freight meeting duration, rather than the previous fifteen-minute fixture assumption.
Limits and examples: NOT a universal time for all business negotiations; implementation unverified in this package.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.7 — Mileage-based freight quotes

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Freight price may include base/dispatch fee plus rate per expressly defined chargeable distance; terms must specify loaded, empty, one-way, return and mileage responsibility.
Limits and examples: No hidden universal round-trip billing.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.8 — Millbrook prototype rate card

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: PROVISIONAL CALIBRATION
Decision / retained scope: User-reported current development fixture: Millbrook one-way 50 miles; 100-mile assumed round trip; base 25 cents; 1 cent/chargeable mile; quoted 125 cents.
Limits and examples: Configuration observation only, NOT historically validated, not a universal tariff and not confirmed in Unity here.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.9 — Arrival-driven walking

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: Physical A-to-B walk tasks end on actual arrival along the route, not an arbitrary fixed timer.
Limits and examples: Journey time reflects actual movement and time scaling.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.10 — Off-map regional journey state

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / CLARIFIED
Decision / retained scope: Use a departure point then an authoritative off-map journey with elapsed time, distance, inventory/cargo custody, equipment and resource consumption; do not

teleport stock.
Limits and examples: Off-map leg need not be fully rendered.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.11 — Real animal and vehicle assets

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Horse and wagon assets must retain owner, availability, condition, location and compatible use, not exist as a visual-only freight effect.
Limits and examples: Movement and capacity are reserved; no double-use.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

9.12 — Multi-stop and pooled freight

Classification: CONFIRMED USER DECISION
Reconciliation: PRIOR DECISION / VERIFY DETAILS
Decision / retained scope: Support multi-stop collections and deliveries, backhauls, through-cargo, employee assignments, optional subcontract and pooled authorized vehicle use while preserving property and contractual ownership.
Limits and examples: Recovered earlier approval per user's handoff; preserve existing detailed rules.
Related source routes: CAN-XXXI pp. 6, 92, 183–185; TECH-XIV pp. 5, 79–80.

Part 10 — Labor and daily activities

10.1 — Young workers exist

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Younger people may do historically supported work/apprenticeship within actual ability, applicable law and availability; remove an unnecessary legacy YoungWorker category only where code audit confirms duplication.
Limits and examples: Objecting to an enum is NOT rejecting youth labor.
Related source routes: CAN-XXXI pp. 3–4, 17, 114; TECH-XIV pp. 3–4, 16, 75.

10.2 — Persons retain careers and skills

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: A Person outlasts a job or business, retaining memory, accumulated skills, professional opportunities and identity after moving or retraining.
Limits and examples: No worker identity reset.
Related source routes: CAN-XXXI pp. 3–4, 17, 114; TECH-XIV pp. 3–4, 16, 75.

10.3 — Human labor constraints

Classification: CONFIRMED USER DECISION
Reconciliation: PRIOR DECISION / VERIFY DETAILS

Decision / retained scope: Labour depends on sleep, nutrition, fatigue, commuting, skills, overtime, mistakes, lateness, preference, wages, raises, bonuses and outside job offers, without excessive owner micro-management.
Limits and examples: Do not create imaginary productivity bonuses detached from material conditions.
Related source routes: CAN-XXXI pp. 3–4, 17, 114; TECH-XIV pp. 3–4, 16, 75.

10.4 — Non-overlapping task priorities

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Survival and personal needs, work and travel compete for finite actual Person time; infeasible parallel tasks wait for an available slot.
Limits and examples: Avoid impossible simultaneous labor and travel.
Related source routes: CAN-XXXI pp. 3–4, 17, 114; TECH-XIV pp. 3–4, 16, 75.

10.5 — Observed excessive walking speed

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: REQUIRES LIVE REPRODUCTION
Decision / retained scope: Measure NPC actual distance in world units, elapsed ticks, time multiplier and expected physical speed before declaring movement too fast; no timer workaround.
Limits and examples: Human November 4 playtest observation, root cause not verified.
Related source routes: CAN-XXXI pp. 3–4, 17, 114; TECH-XIV pp. 3–4, 16, 75.

Part 11 — Households and circular economics

11.1 — Household needs consume resources

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Households acquire and consume real goods to satisfy needs and those purchases reduce their resources and sellers' physical stocks.
Limits and examples: No abstract hunger meter supplied by phantom goods.
Related source routes: CAN-XXXI pp. 3, 7, 17, 84, 185; TECH-XIV pp. 5, 70, 79.

11.2 — Finite household purchasing power

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Households budget finite cash/income against debts, necessities, housing, product prices, quality and travel, rather than spending unlimited money.
Limits and examples: Subsistence production may satisfy some needs outside retail purchases.
Related source routes: CAN-XXXI pp. 3, 7, 17, 84, 185; TECH-XIV pp. 5, 70, 79.

11.3 — Stock and custody precede consumption

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Bought items do not become locally consumable until genuinely received or transferred into the consuming Person or household's possession.
Limits and examples: Use physical inventory and locations, not an aggregate wallet of goods.
Related source routes: CAN-XXXI pp. 3, 7, 17, 84, 185; TECH-XIV pp. 5, 70, 79.

11.4 — Autonomous circular economy

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED
Decision / retained scope: Real household needs drive purchases, retail replenishment, procurement, freight, production, wages and new customer opportunities as interconnected loops.
Limits and examples: No isolated demand-spawning script is a substitute.
Related source routes: CAN-XXXI pp. 3, 7, 17, 84, 185; TECH-XIV pp. 5, 70, 79.

Part 12 — Estate, inheritance and succession

12.1 — Death leaves estate and claims

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED / RESEARCH HOLD
Decision / retained scope: Death does not erase ownership or assets; estates, heirs, managers and creditors continue through historically applicable succession and debt rules.
Limits and examples: This user confirmation specifically authorizes the estate principle without approving all pending proposal 115 wording.
Related source routes: CAN-XXXI pp. 17, 105, 222; TECH-XIV pp. 16, 20, 88.

12.2 — Heirs do not inherit work skills

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED / RESEARCH HOLD
Decision / retained scope: An heir can inherit property or business ownership without operational skills and may appoint employees, lease or sell it under governing law; no universal spouse-inherits-everything rule.
Limits and examples: Historical legal inheritance rules need dated jurisdictional evidence.
Related source routes: CAN-XXXI pp. 17, 105, 222; TECH-XIV pp. 16, 20, 88.

12.3 — Inheritance lower immediate priority

Classification: USER DESIGN PREFERENCE
Reconciliation: DEFERRED PRIORITY
Decision / retained scope: Document estate continuity now but focus current development resources on functional economy, freight and actual production before detailed succession workflows.

Limits and examples: Deferral is not a removal of the eventual feature.
Related source routes: CAN-XXXI pp. 17, 105, 222; TECH-XIV pp. 16, 20, 88.

Part 13 — Simulation time

13.1 — Optional real-time 1:1 mode

Classification: USER DESIGN PREFERENCE
Reconciliation: OPEN SPEED CONFIGURATION
Decision / retained scope: An optional 1:1 real-time pace is desired for immersion and experimentation rather than assumed default gameplay speed.
Limits and examples: Exact mapping of clock to game day remains under review.
Related source routes: CAN-XXXI pp. 92, 114; TECH-XIV pp. 79–80.

13.2 — Accelerated time calibration

Classification: OPEN DESIGN QUESTION
Reconciliation: OPEN CALIBRATION
Decision / retained scope: User expects common accelerated play, with 10x discussed and 30 seconds per in-game day explored; speed scale and day duration must be reconciled before locking values.
Limits and examples: Do not publish 30 seconds/day as a final global timing equation.
Related source routes: CAN-XXXI pp. 92, 114; TECH-XIV pp. 79–80.

13.3 — Temporal and spatial coherence

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Faster simulation must advance tasks, motion, consumption and distance in consistent time units without impossible movement or resource throughput.
Limits and examples: Validate with real route samples at different speed multipliers.
Related source routes: CAN-XXXI pp. 92, 114; TECH-XIV pp. 79–80.

Part 14 — Unity authoring and human playtest observations

14.1 — Open Frontier should be selectable

Classification: CONFIRMED USER DECISION
Reconciliation: CLARIFIED / IMPLEMENTATION HOLD
Decision / retained scope: Open Frontier is the sandbox/freeform mode; the current report that startup opens First Ledger objectives must not create a prerequisite to play First Ledger.
Limits and examples: Report issue as user-observed until live code/UI validation.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.2 — Small development town is fixture only

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: DEVELOPMENT FIXTURE
Decision / retained scope: User-reported current fixture has nine residents, five households,

four businesses; it is not the canonically intended normal population or staffing quota.
Limits and examples: Do not generalize seeded fixture values to normal game worlds.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.3 — DevelopmentTownConfiguration consolidation

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: REPORTED PRIOR CODE CHANGE
Decision / retained scope: The previous SixPersonDevelopmentFixture and ExpandedSliceFixture were reportedly consolidated into DevelopmentTownConfiguration.
Limits and examples: Requires current repository verification; don't regenerate duplicate fixtures.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.4 — Unity startup authoring versus live state

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Unity scene supplies initial physical setup, not continuing ownership, tenant, debt, inventory or work-state authority; economic simulation becomes controlling after start.
Limits and examples: No re-seeding at each scene reload.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.5 — Camera zoom limitations

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: REQUIRES LIVE REPRODUCTION
Decision / retained scope: Expand comfortable camera inspection/zoom-out range after measuring existing limits and respecting performance/readability; no numeric boundary approved.
Limits and examples: Playtest feedback, no fixed camera bounds.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.6 — Possible expanded terrain

Classification: OPEN DESIGN QUESTION
Reconciliation: NOT AUTHORIZED
Decision / retained scope: Adjacent terrain might expand play space, but loading and performance costs need evaluation before work is scheduled.
Limits and examples: Not an immediate development instruction.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.7 — NPC selection blocked by building

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: REQUIRES LIVE REPRODUCTION
Decision / retained scope: Selecting an individual NPC sometimes selects the building beneath instead; inspect raycasts/UI selection layering and reproduce before changing code.

Limits and examples: Cause not verified by documentation updater.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.8 — Town and management UI readability

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: REQUIRES DESIGN PASS
Decision / retained scope: Town screen business and resident information overlaps, text becomes illegible, management views are verbose and choices may lack meaning; fix information hierarchy when prioritized.
Limits and examples: Avoid endless cosmetic cycles during foundational economy work.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.9 — Preserve authored horse/wagon transforms

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: PRESERVE UNITY AUTHORING
Decision / retained scope: Horse and wagon transforms, hitch anchors, approximately 0.7 horse visual scale and wagon visual rotation were hand-authored; suspected double scaling/floating issue requires investigation, not unapproved prefab resets.
Limits and examples: Only user/developer with scene authority should approve changes to authored transforms.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

14.10 — Wagon cloth variants

Classification: IMPLEMENTATION OR PLAYTEST OBSERVATION
Reconciliation: LOW-PRIORITY ART NOTE
Decision / retained scope: Wagon visual cloth material variants exist or were authored; don't prioritize randomizing them ahead of transport correctness.
Limits and examples: Do not claim variants are in current repository without inspection.
Related source routes: CAN-XXXI pp. 5, 92, 257; TECH-XIV pp. 4, 79, 88.

Part 15 — Previously established economic systems

15.1 — Inter-business physical transfers

Classification: CONFIRMED USER DECISION
Reconciliation: PRIOR DECISION / VERIFY DETAILS
Decision / retained scope: Owned businesses can request quantity, percentage, cadence and reserve-based inventory transfers, limited by real stock, storage, rights, schedule, labor and transport; internal prices may follow existing agreements.
Limits and examples: Use no phantom goods and no consolidated artificial profit.
Related source routes: CAN-XXXI pp. 2–7, 30, 183–185, 194; TECH-XIV pp. 2–7, 20, 79, 88.

15.2 — Composable enterprise activities

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED

Decision / retained scope: Extraction, craft, retail, transport and service depend on real methods and resources under the shared generic Business authority, not a hard industry-class gate.
Limits and examples: Specialized expertise changes execution outcome rather than granting a magic business type.
Related source routes: CAN-XXXI pp. 2–7, 30, 183–185, 194; TECH-XIV pp. 2–7, 20, 79, 88.

15.3 — Physical local stock and portfolio read models

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Inventory remains with physical custodian/location; portfolio dashboards show derived totals without creating centralized instantly spendable goods.
Limits and examples: Historical realism may delay data visibility, not alter stock location.
Related source routes: CAN-XXXI pp. 2–7, 30, 183–185, 194; TECH-XIV pp. 2–7, 20, 79, 88.

15.4 — Foreclosure and property security

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Debt default, collateral sale, insolvency, security interests and foreclosure follow time, contract, evidence and legal processes; destroying collateral does not erase creditor claims.
Limits and examples: No instant arbitrary asset deletion.
Related source routes: CAN-XXXI pp. 2–7, 30, 183–185, 194; TECH-XIV pp. 2–7, 20, 79, 88.

15.5 — Every actor is an economic participant

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Persons, households, firms and communities make legitimate economic and social choices; demographic representation must rely on sourced, contextual mechanisms instead of stereotypes or generic hostility.
Limits and examples: No arbitrary class or group-wide behavior penalties.
Related source routes: CAN-XXXI pp. 2–7, 30, 183–185, 194; TECH-XIV pp. 2–7, 20, 79, 88.

15.6 — Delegated manager authority

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Managers handle routine procurement, staffing, service and production without owner physical presence while retaining explicit authorization for mortgages, major loans, transfers of ownership and other material decisions.
Limits and examples: Full Autonomy is bounded, explainable and leaves real resource cost.
Related source routes: CAN-XXXI pp. 2–7, 30, 183–185, 194; TECH-XIV pp. 2–7, 20, 79, 88.

15.7 — Causal settlement transformation

Classification: CONFIRMED USER DECISION
Reconciliation: ALREADY COVERED / REAFFIRMED
Decision / retained scope: Town growth responds to households, transport, buildings, land, demand, industry and institutions through real-world processes; avoid population thresholds or scripted building unlocks.
Limits and examples: Starting village is not fixed for 20 years.
Related source routes: CAN-XXXI pp. 2–7, 30, 183–185, 194; TECH-XIV pp. 2–7, 20, 79, 88.

Part 16 — Explicit non-Canon and numerical safeguards

None of the following may become a blanket mechanic or calibrated constant without separate evidence and approval.

1. Universal 33% or 50% equipment-utilization threshold.
2. Mandatory 10%, 25% or 50% above-market asset-sale acceptance.
3. Mandatory $200 horse-and-wagon valuation.
4. Mandatory $300 business startup capital.
5. Mandatory 6-cent or 8-cent bread prices.
6. Universal 7% interest for three years on seller financing.
7. Permanent $0.25 freight base/dispatch fee.
8. Permanent $0.01 per mile freight tariff.
9. Universal round-trip distance billing for all carriers.
10. Universal five-minute commercial-meeting duration.
11. Final 0.5-meter interior grid.
12. Hard BoardingHouse type restricting all rooms to lodging.
13. Automatic inclusion of real estate in business purchase.
14. Tenant granting buyer ownership of landlord property.
15. Unlimited emergency borrowing for distressed NPCs.
16. Perfect NPC economic optimization.
17. Mandatory eventual failure or debt for every NPC.
18. Scripted outcomes for Glen, Ethan, Shane, Jacob or other test actors.
19. Blanket historical or demographic IQ penalty.

20. Universal inheritance of every asset by spouse.
21. Permanent 30-second game day without confirmed clock-speed rule.
22. Nine-resident development fixture as normal canonical settlement population.
23. First Ledger as a mandatory prerequisite to Open Frontier.
24. Claimed Unity implementation/pass based solely on source code, design conversation or conceptual test.

Part 17 — Current development priorities, not a Unity status claim

Immediate objective: complete and validate an autonomous, circular town economy, without introducing a second economic authority or treating a conceptual walk-through as a Unity pass.

Target chain: Bakery identifies flour need → Glen contacts Ethan → legitimate verbal/mileage agreement → Shipment → horse/wagon preparation → travel to regional Millbrook → pickup/load real cargo → off-map and represented travel → return/unload into Bakery stock → service settlement → other Bakery inputs (including fuel) → bread production → real customer sales → household consumption → retailer restocking.

Report implementation status per step only after current repository inspection and, where meaningful, Unity runtime tests. Any completed, source-only or unimplemented stages must remain separately marked. Start-up timing of five minutes and Millbrook 50/100-mile rate-card are fixture values only.

Next broad capability groups (not an inviolable order): NPC entrepreneurship and failure; real asset trades and equipment hire; business, buildings and property ownership; leases, credit and seller financing; customer competition; functional room outfitting; employment; world change; estate and succession later.

Part 18 — Documentation management scope

This handoff is a design source. Route each item through original governing PDFs, previously approved proposals, specialist research and this dated register. Never change original PDFs, grant pending 106–145 blanket authority, hardcode illustrative numbers, or tell Codex the code is already verified. Maintain exact versioned path and hash manifests. The only work authorized by this document is documentation maintenance.
