LAND & LEDGERS

SCENARIO, PLAYTEST AND REGRESSION REFERENCE

CURRENT INTEGRATED EDITION · 31 OCTOBER 2026

Date: 8 October 2026 | **Status:** Extracted scenario reference, not runnable scenario definitions | **Authority:** Canon XXXI remains governing.

Method. All scenario claims below come from dated Canon/Technical cumulative PDFs with page trails, not from source project scene/ScenarioDefinition JSON. Text-playtest results are evidence of conceptual stress testing, not proof of Unity mechanics. Earlier autonomous playtest numerical outcomes are illustrative, not universal balance parameters.

I. Global scenario doctrine

1. Objectives read real events and authoritative economic/physical state; objectives may not generate people, property, passengers, cargo, credit or business activity needed for their own completion (Canon XXXI p.7).
2. Each predicate is explicitly Event, Current, Maintained, or Cumulative, with a dated evidence reference and scenario-qualified geographic scope.
3. Completion of an event milestone normally survives later disposal of an enabling asset; maintained or current ownership qualifications reevaluate.
4. Ownership qualification explicitly distinguishes sole, joint, controlling, minority and genuinely independent NPC state.
5. Scenario equity uses authored asset/liability inclusion, valuation basis and starting-asset policy; debt proceeds do not create equity.
6. Scenario failure does not automatically equal commercial bankruptcy or destruction of the persistent world (Canon XXXI p.114).
7. Role constraints in a deliberate scenario may restrict the player's labor, but do not change ordinary simulation rules for everyone else.
8. Keep text-playtest data, rules and executable Unity test results in separate source/evidence categories.

II. Scenario and playtest registry

SCN-001 — The Crossing

Category: Full-systems settlement founder **Source:** Canon XXXI PDF pp.1, 5–9; Technical XIV PDF pp.1–8 **Baseline:** 1870 northern-Dakota river crossing; one player, one cabin, $500, no local service town are playtest setup, not universal start **Systems:** Ferry, retail, smithing, construction, lumber, property, contact-graph hiring, freight, warehouse, river service and manager autonomy **Objective/acceptance notes:** Preserve independently owned NPC enterprise, freight/passenger evidence, current-equity definition and business operating proof; verify exact full scenario objectives against standalone scenario source if available **Confidence:** Validated text playtest finding, not Unity integration proof

SCN-002 — The Market Town

Category: Autonomous mixed business and growth **Source:** Canon XXXI PDF pp.10–20; Technical XIV preserved Revision XIII pp.9–20 **Baseline:** Growing settlement, rental development, finance office/banking, pharmacy/barber/butchery and demography **Systems:** Manager independence, rental project completion vs occupancy, finance deposits vs owner cash, loan placement, household continuity **Objective/acceptance notes:** Scenario-specific goals and setup require source-specific extraction; owner cash, business cash and debt must reconcile **Confidence:** Validated text playtest finding, not Unity integration proof

SCN-003 — The Enterprise Ladder

Category: Progression and corporate control **Source:** Canon XXXI PDF pp.119–125; 125–133 **Baseline:** Preserved playtest 1880–1890 with bakery, grain company, rail corporation; historical setup is not universal starting date **Systems:** Business transferability, segment costs, rail company capitalization and phased service, standing contracts, meaningful tasks **Objective/acceptance notes:** Geographically scoped objective, cash/value/ownership filters and milestone semantics; precise deadlines from actual scenario definition **Confidence:** Validated text playtest finding, not Unity integration proof

SCN-004 — The Saloon Circuit

Category: Three-town business ownership and vertical integration **Source:** Canon XXXI PDF pp.113–118 and later preserved saloon sections; Technical XIV preserved Rev IV p.4–5 **Baseline:** Scenario with three saloon locations; specific objective wording controls **Systems:** Owned farm poultry -> processing -> transport -> preparation -> individual qualifying customer transaction, gambling cash and independent concession **Objective/acceptance notes:** Internal provenance counts only proven qualifying transactions; event milestones remain complete after selling supplier; 100%-current ownership where authored **Confidence:** Scenario ideas/provenance fixtures; current exact full goal list needs scenario artifact

SCN-005 — The Contractor

Category: Construction and paid-work accomplishments **Source:** Canon XXXI PDF pp.42–46 and pp.108–112; Technical XIV preserved Rev V **Baseline:** Construction contractor path, individual labor and paid contracts **Systems:** Actual work periods, crews, overlap, contractor qualification from evidence and truthful construction cost **Objective/acceptance notes:** Paid contract evidence, person-specific self-labor hours, hire/zero-manual labor predicates and active-overlap window; deadlines only from approved scenario definition **Confidence:** Scenario design with regression fixtures; not verified in Unity

SCN-006 — A Town From Nothing / The Promoter

Category: Autonomous settlement formation and economic viability **Source:** Canon XXXI PDF pp.18–20, 108–113; Technical XIV preserved Rev XIII pp.17–20 **Baseline:** New/collapsing economic locality; NPC/private enterprise and civic/route options **Systems:** Population from Persons, homes from physical occupancy, business operation, real capital and migration sources **Objective/acceptance notes:** Cannot create migrants, residents or firms solely to

satisfy objective; no universal population bonus **Confidence:** Scenario concept and fixture, exact objective pack research hold

SCN-007 — Ashes & Notes

Category: Distress, debt and reconstruction **Source:** Canon XXXI PDF pp.108–113 **Baseline:** Damaged collateral, finance and recovery circumstances **Systems:** Asset losses do not erase debt; cash obligations, lender rights, insurance if applicable and repair work **Objective/acceptance notes:** Restructuring/foreclosure and objective must read separate obligations and rights **Confidence:** Scenario concept, detailed starting state requires original source

SCN-008 — The Long Haul / Gateway / Deep Mine / Timber Country / The Panic

Category: Proposed sectoral scenario concepts **Source:** Canon XXXI PDF p.236 **Baseline:** Appendix design examples; NOT complete authored scenario definitions **Systems:** Freight contracts, service networks, mining and lumber input, finance stress **Objective/acceptance notes:** Archive as development candidates until individually authored objectives, setups and tests exist **Confidence:** Proposals only, no completed playtest claims

SCN-009 — The First Vein

Category: Mining, capital ownership and long-run delegated enterprise **Source:** Archival conceptual playtest handoff of 2026-10-29, original Part 2.4 and Parts 4–6; original 1877–1890 generated state is **not actual Unity execution**. **Setup:** Authored Black Hills-region 1877 beginning; player controls Juniper No. 1 (100% starting ownership under the playtest preference). Geology, lawful claims and title, transport, mill processing, buyers, debt, managers and NPC businesses act through shared systems. Player preference for purchased fee land/owned mill does not force other scenarios. **Systems:** Independent assay; physical ore mass and recoverable-value accounting; mine/transport/mill work, title and fee-interest distinctions, equity/debt; manager exception-led operation; independently owned NPC business; demographic residence continuity. **Objective rule:** Seven precisely specified goals below. Their 6/7 achievement in the conversational continuation is illustrative only. The old $400 profit within 6 months goal was removed and MUST NOT reappear.

1 — 1877-12-31

- **Exact scenario objective:** Legal control of the prospect, 2 in-situ samples and an independent assay
- **Validation note:** Control and sample events separately sourced

2 — 1878-12-31

- **Exact scenario objective:** First actual paid mineral or recovered-gold sale
- **Validation note:** Payment, not just quote or unpaid invoice

3 — 1882-12-31

- **Exact scenario objective:** 650 cumulative owner recovered-and-sold troy ounces
- **Validation note:** Raw ore sale does not count

4 — 1884-12-31

- **Exact scenario objective:** Two genuinely independent NPC-owned businesses, each operating 90 days and completing 5 external paid sales
- **Validation note:** Excludes subsidiaries and internal bills

5 — 1886-12-31

- **Exact scenario objective:** 850 owner recovered-and-sold troy ounces in any consecutive 12 months, plus positive mining operating profit
- **Validation note:** Profit boundary and timing need authored definition

6 — 1888-12-31

- **Exact scenario objective:** At least 90 permanent residents continuously for 60 days
- **Validation note:** Actual Person/Household primary residence

7 — 1890-12-31

- **Exact scenario objective:** 5,500 cumulative owner recovered-and-sold troy ounces AND $18,000 reconciled owner equity
- **Validation note:** Asset/liability basis and opening balances required

Open evidence: Historical gold market terms, mining recovery, millsite and property rights, precise Goal 5 mining profit perimeter, Goal 7 accounting opening equity and current Unity implementation. No conceptual win/loss may be marked an executed QA result.

III. Cross-scenario acceptance fixture bank

QA-001 — Generic Business

- **Acceptance requirement:** Create Business with no type, then supply merchandise/forge; classification may change while action feasibility follows actual state
- **Source trail:** TECH XIV pp.6–7

QA-002 — Worker autonomy

- **Acceptance requirement:** Physically possible but unsafe/out-of-contract assignment permits refusal
- **Source trail:** TECH XIV p.7

QA-003 — Employment contactability

- **Acceptance requirement:** Person is not globally recruitable; a real introduction/referral creates contact and response latency
- **Source trail:** TECH XIV p.7

QA-004 — Active work vs contract signatures

- **Acceptance requirement:** Count actual labor assignments and overlapping Work intervals rather than agreement dates
- **Source trail:** TECH XIV preserved Rev V; Canon XXXI pp.108–112

QA-005 — Chicken provenance

- **Acceptance requirement:** Owned source animal -> lawful transformation -> shipment -> kitchen output -> sale to real customer; outside purchase fails internally sourced objective
- **Source trail:** TECH XIV preserved Rev IV pp.4–5

QA-006 — Blocked shipment

- **Acceptance requirement:** No fabricated loaded cargo can coexist with source-stock restoration across failed dispatch and save/load
- **Source trail:** TECH XIV preserved Rev IV pp.4–5

QA-007 — Business ownership

- **Acceptance requirement:** Independently owned NPC-business objective does not count controlled subsidiaries
- **Source trail:** TECH XIV pp.6–7

QA-008 — Equity

- **Acceptance requirement:** Borrowing increases cash and debt equally, not owner equity; starting asset inclusion is scenario-defined
- **Source trail:** Canon XXXI p.7, TECH XIV p.6

QA-009 — Historical toggle

- **Acceptance requirement:** Disabled authored Panic cannot inject effect, endogenous distress still possible
- **Source trail:** TECH XIV pp.6–7

QA-010 — Operating state

- **Acceptance requirement:** Constructed building/Business identity does not satisfy OperatingBusiness
- **Source trail:** TECH XIV p.6

QA-011 — NPC continuity

- **Acceptance requirement:** Population from actual Person arrivals and residence, not project or housing completion
- **Source trail:** TECH XIV preserved Rev XIII; Canon XXXI pp.4–8

QA-012 — True asset reorganization

- **Acceptance requirement:** Merger transfers underlying obligations, cash, property and employees once; grouping does not

- **Source trail:** TECH XIV pp.5–7

QA-013 — Portfolio autonomy

- **Acceptance requirement:** Extended ordinary operation with zero owner clicks, real manager activities and owner-locked decisions respected
- **Source trail:** TECH XIV p.7, Canon XXXI pp.4–5

QA-014 — Record reconciliation

- **Acceptance requirement:** Known ledger correction carries explicit adjustment evidence, never silently rewritten history
- **Source trail:** TECH XIV pp.6–7

QA-015 — Rail service opening

- **Acceptance requirement:** Survey, financing, grade, tracks, facilities and actual train service remain separate
- **Source trail:** TECH XIV preserved Rev VIII; Canon XXXI pp.70–82

QA-016 — Save/load idempotence

- **Acceptance requirement:** Active recruitment, queued work, shipment, reorganization, biological incubation and historical event injection do not double-fire
- **Source trail:** TECH XIV p.7

Additional cross-scenario acceptance fixtures (from mining/autonomy analysis)

QA-017 — Assay and geological uncertainty

- **Acceptance requirement:** Selected specimen does not determine all orebody grade; separate independent in-situ samples/assayer events
- **Source trail:** First Vein, Parts 2.4, 5.3

QA-018 — Ore-lot conservation

- **Acceptance requirement:** Extraction, transport, milling, tailings, concentrates and paid sale reconcile mass/value without duplication
- **Source trail:** First Vein, Parts 5.3, 6

QA-019 — Raw ore versus recovered metal

- **Acceptance requirement:** Raw-ore sale never counts toward owner recovered-and-sold troy ounces
- **Source trail:** First Vein, Part 2.4

QA-020 — Toll milling

- **Acceptance requirement:** Processor earns fee but does not take title to customer-owned ore or bullion without transaction
- **Source trail:** First Vein, Part 5.3

QA-021 — Mineral site legal interests

- **Acceptance requirement:** Claim, millsite, patent, deeded fee land, lease and lien remain legally distinct across time
- **Source trail:** First Vein, Part 5.5

QA-022 — Owner-authority exceptions

- **Acceptance requirement:** Standing operation proceeds without repetitive clicks, but out-of-policy debt, purchase and dilution require approval
- **Source trail:** First Vein, Part 1

QA-023 — Eighty-day strategy jump

- **Acceptance requirement:** Real work, wages, purchases, route capacity and loan service resolve across long player time advance
- **Source trail:** First Vein, Part 4.2

QA-024 — NPC independence

- **Acceptance requirement:** At least 90 continuous operating days and 5 outside paid sales; no player subsidiaries qualify
- **Source trail:** First Vein, Part 2.4

QA-025 — Rolling mining profit

- **Acceptance requirement:** Any qualifying consecutive 12 months of 850 recovered-and-sold oz AND positive operating profit, only after expense perimeter specified
- **Source trail:** First Vein, Part 2.4

QA-026 — Resident continuity

- **Acceptance requirement:** 90 permanent residents for 60 continuous days; temporary population excluded
- **Source trail:** First Vein, Part 2.4

QA-027 — Reconciled owner equity

- **Acceptance requirement:** Goal 7 excludes fabricated opening balance and discloses debts, market estimates and policy for starting assets
- **Source trail:** First Vein, Part 8

QA-028 — Oral agreement evidence

- **Acceptance requirement:** Dispute compares real notice, performance, witnesses and dated law; paper status alone not an absolute truth gate
- **Source trail:** First Vein, Part 5.7

QA-029 — Bad-geology campaign

- **Acceptance requirement:** Mine may fail economically under poor geology, cash scarcity, bad transport and rejected offers
- **Source trail:** First Vein, Parts 4, 6

IV. Provenance and generated-number cautions

- The Crossing $500, The Enterprise Ladder 1880 start and illustrative chicken quantities are valid for those playtests only; none updates the baseline 1870 start or default owner wealth.
- Exact deadlines, all objectives, map/settlement placement, starting populations and cash require their individually approved scenario definitions; the cumulative Canon snippets do not substitute for those assets.
- Scenario event evidence must survive save/load, owner transfer where applicable and time jumps without replay creating an extra transaction.
- Preserve campaign checkpoint IDs, parent checkpoint, time, source event span, cash/inventory/debt and reconciliation status so a simulated story cannot manufacture exact accounting facts.
- Keep scripted historical-event settings and physically generated incidents independently testable.

V. Outstanding work and implementation prerequisites

- Obtain the complete latest standalone authored scenario definitions, if any, before treating listed concepts as shippable objectives.
- Inspect Unity project source/test harness; no source code was accessible in this documentation-only pass.
- Write executable acceptance harnesses for each fixture and verify on/off-map, save/load, actor relocation, cross-business transfer and ownership changes.
- Add scenario version/change provenance so revised objectives cannot rewrite already earned historical milestones silently.

VI. Package status

This document catalogs and organizes scenario evidence. It is NOT a full playable scenario pack, nor a pass/fail record of Unity tests.

November 4, 2026 human playtest report — observations, not Unity verification by documentation manager

The owner reported behavior observed while operating the small development-town scene. This evidence is **human report** and may help reproduce problems, but this documentation update did not access the scene, runtime logs or live repository. The immediate objective is a circular Bakery / legitimate freight / household consumption chain. Do not mark the complete chain as passed.

The exact reproducibility checklist is 06_SCENARIOS_AND_TESTS/NOV04_HUMAN_PLAYTEST_OBSERVATIONS_REPRO_LIST.cs

v. It covers walking speed, NPC selection, startup objectives, camera range, UI overlap, horse/wagon transforms, development-fixture counts and Millbrook rate-card assumptions.

Glen, Ethan, Shane and the nine-resident town are **illustrative or development fixtures**, not global required outcomes. Owner-confirmed design mechanics live in 02_APPROVED_AND_SOURCE_BACKED_UPDATES/05_POST_CANON_USER_DESIGN_DECISIONS_2026-11-04.md; do not elevate this scenario report into overriding Canon.
