LAND & LEDGERS | DOCUMENTATION 3.0

Dead Scripts Interactive • 31 October 2026 • Rolling release

Document authority

The unmodified, full 346-page Canon XXXI governs established gameplay. The unmodified, full 170-page Technical XIV governs target implementation, subordinate to Canon. The shorter v2.3 editions are navigation only.

Approved design updates

The 105 numbered design directions are approved; items 106–145 remain pending. First Vein design materials are available as explicitly sourced post-Canon updates and scenario fixtures. Its conceptual 6/7 result is not evidence of Unity functionality.

Search and trace

The two governing PDF originals have complete UTF-8 page-aligned text copies. An anchor index covers 5,046 older audit entries; a 516-page extraction coverage register and optional SQLite FTS5 search database support precise original-PDF page lookup.

Quality status

Source hashes and page counts were checked against v2.1, v2.2 and v2.3. Source-by-source semantic no-loss certification and separate independent-reviewer signoff are NOT achieved; full originals therefore remain authoritative.

Missing source evidence

The named independent v2.3 audit report and 78-file inventory were not available. Their reported findings were investigated where supported by accessible material. Original absent files were not fabricated.

Install

For ChatGPT Project Sources use the single v3.0 ZIP. For Kens-PC, Codex installs extracted contents in F:\Land & Ledgers\Planning Sources after staging, backup, SHA-256 checking and safe removal of older managed documentation.

Next code priority

Codex must inspect its current local Unity repository and re-audit blocked-shipment duplication, exact-once economic settlement, generic Business action gating, Person agency, ownership rights and First Vein scenario predicates before changing game code.
